

Claims

- 1) Use of an isolated regulatory nucleic acid sequence comprising a regulatory sequence
as represented in SEQ ID NO 1 or a functional fragment or a functional variant thereof,
5 for driving expression of an associated nucleic acid sequence in a non-
monocotyledonous plant or plant cell.
- 2) Use of an isolated regulatory nucleic acid sequence according to claim 1, wherein said
associated nucleic acid sequence is an isolated nucleic acid sequence or a nucleic acid
10 sequence endogenous to the host cell in which said isolated regulatory nucleic acid
sequence is introduced.
- 3) A non-monocotyledonous plant cell comprising or having stably integrated into its
genome a recombinant nucleic acid as represented in SEQ ID NO 1 or a functional
15 fragment or a functional variant thereof.
- 4) A non-monocotyledonous plant cell according to claim 3, wherein said non-
monocotyledonous plant cell is derived from a fodder or forage legume, ornamental
plant, food crop, tree or shrub, preferably from cotton, potato, tomato, cabbage, sugar
20 beet, soybean, bean, sunflower or peas.
- 5) A plant cell culture, callus or a plant consisting essentially or in part of plant cells
according to claim 3 or 4.
- 25 6) A harvestable part, organ, tissue or propagation material of a plant according to claim
5.
- 7) Method for expression of a nucleic acid sequence in a non-monocotyledonous plant or
plant cell, said method comprising introducing into said plant or plant cell a regulatory
30 sequence represented by SEQ ID NO 1 or a functional fragment or functional variant
thereof, wherein said regulatory sequence is capable of driving expression of said
nucleic acid sequence which is either an isolated or an endogenous nucleic acid
sequence.
